

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-11 (Canceled).

Claim 12. (Currently Amended) A server apparatus connected to a transmitting IP apparatus, the transmitting IP apparatus transmitting an e-mail to a receiving IP apparatus via the server apparatus, the server apparatus comprising:

a memory configured to store an IP address of related to the receiving IP apparatus ~~associated~~ in association with a telephone number of related to the receiving IP apparatus, the IP address of related to the receiving IP apparatus being distinct from an e-mail ~~addresse~~ address;

a receiver configured to receive the e-mail from the transmitting IP apparatus, the e-mail including the telephone number of related to the receiving IP apparatus;

an analyzer configured to obtain, from the received e-mail, the telephone number of related to the receiving IP apparatus, and to obtain, from the memory, the IP address of the receiving IP apparatus associated with the telephone number of related to the receiving IP apparatus, the receiving IP apparatus to which the IP address is related, being the same as the receiving IP apparatus to which the telephone number is related;
and

a transmitter configured to transmit the received e-mail to the receiving IP apparatus, based on the IP address of related to the receiving IP apparatus.

Claim 13. (Currently Amended) The server apparatus according to claim 12, wherein the transmitter transmits an error message to the transmitting IP apparatus

when the memory does not store the IP address of the receiving IP apparatus associated in association with the telephone number of the receiving IP apparatus.

Claim 14. (Currently Amended) The server apparatus according to claim 12 further being connected to a H.323 gatekeeper, the H.323 gatekeeper storing the IP address of the receiving IP apparatus associated in association with the telephone number of the receiving IP apparatus, wherein the analyzer being configured to determine whether the memory stores the IP address of related to the receiving IP apparatus, and when it is determined that the memory does not store the IP address of related to the receiving IP apparatus, the transmitter accesses the H.323 gatekeeper to obtain the IP address of related to the receiving IP apparatus.

Claim 15. (Currently Amended) The server apparatus according to claim 12, wherein a header of the e-mail from the transmitting IP apparatus includes the telephone number of related to the receiving IP apparatus.

Claim 16. (Currently Amended) A communication system comprising:

a transmitting IP apparatus; and

a server apparatus,

the transmitting IP apparatus comprising:

a panel configured to input a telephone number of related to a receiving IP apparatus; and

a transmitter configured to transmit, to the server apparatus, an e-mail including the input telephone number of related to the receiving IP apparatus,

the server apparatus comprising:

a memory configured to store an IP address of related to the receiving IP apparatus associated in association with the telephone number of related to the receiving IP apparatus, the IP address of related to the receiving IP apparatus being distinct from an e-mail address;

an analyzer configured to receive the e-mail from the transmitting IP apparatus, to obtain, from the received e-mail, the telephone number of related to the receiving IP apparatus, and to obtain, from the memory, the IP address of related to the receiving IP apparatus associated with the telephone number of the receiving IP apparatus, the receiving IP apparatus to which the IP address is related being the same as the receiving IP apparatus to which the telephone number is related; and

a transmitter configured to transmit the received e-mail to the receiving IP apparatus, based on the IP address of related to the receiving IP apparatus.

Claim 17. (Currently Amended) A method for controlling an e-mail transmission using a server apparatus, the method comprising:

storing, at the server apparatus, an IP address of related to a receiving IP apparatus associated in association with a telephone number of related to the receiving IP apparatus, the IP address of related to the receiving IP apparatus being distinct from an e-mail address;

receiving, from a transmitting IP apparatus, an e-mail, the e-mail including the telephone number of related to the receiving IP apparatus;

obtaining, from the received e-mail, the telephone number of related to the receiving IP apparatus;

obtaining, ~~from the memory,~~ the IP address of related to the receiving IP apparatus ~~associated~~ stored in association with the telephone number of related to the receiving IP apparatus, the receiving IP apparatus to which the stored IP address is related being the same as the receiving IP apparatus to which the stored telephone number is related; and

transmitting the received e-mail from the server apparatus, based on the stored IP address of related to the receiving IP apparatus.

Claim 18. (Currently Amended) The server apparatus according to claim 12, wherein the transmitter transmits the received e-mail to the receiving IP apparatus, based on the IP address of related to the receiving IP apparatus, ~~according to~~ in accordance with a SMTP protocol .
